- **Easy Online Ordering!**

Value Line **LED** Lighting Systems

The value line Night Stik is the “little brother” to our standard Night Stik line of LED lighting products.

By utilizing the same high quality circuit design and components from our standard Night Stik, we add a smaller LED to provide slightly less luminous output, but at a significant cost reduction.

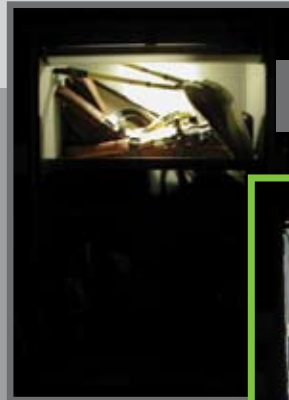

For those areas where the brightest illumination is not as important, the value line offers a very cost effective alternative to high output LED lighting. For those areas where only the brightest light will do, our standard Night Stik covers that need.

The VL series is extremely durable, mounts in nearly any location, is waterproof and comes with a full 5 year free replacement warranty!

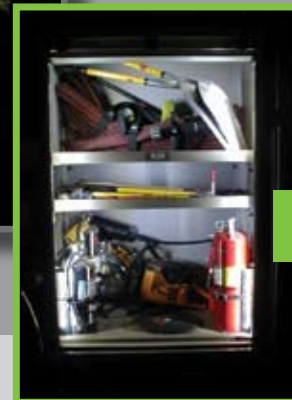

Most inexpensive LED products fall short in the area of product quality and user friendly features. The new VL Nightstik assures you a high quality product, at a competitive price without worry about premature failures. This might be the last light you’ll ever have to buy.

Versatile uses include:

- Compartment lighting
- Underbody and step lighting
- Walkway illumination
- Operators panel illumination
