# The New Standard In Rub Rail Design!

## Limited Lifetime Warranty! Easy Online Ordering!

When On Scene Solutions set out to make the industries best rub rail, we decided right away that it had to be much more than just any run of the mill rail.

We developed a durable, anodized aluminum rail that includes adjustable mounting tracks, billet aluminum end caps and a recessed fascia, to protect LED marker lamps and reflective tape from damage.

An accessory mounting track allows for our "Night Stik" LED light to be installed directly onto the rail, to provide ground lighting directly at your feet, and not wasted under the truck like traditional ground lights.

Each rail comes fully assembled to your specification and ready to install. Gone are the days of expensive prep work to get a rail ready for installation. Simply remove the rail from the packaging material and install.

If you have been looking for a new solution for side body protection, take a closer look, we think you'll be glad you did!
