Limited Lifetime Warranty! Easy Online Ordering!

The new "Talon" helmet mounting system from On Scene Solutions offers an innovative solution to a new problem faced by fire departments.

With the implementation of new rules regarding helmet containment inside of fire apparatus, fire departments are not only challenged to find space to install helmet mounts but also to find devices that will work with multiple helmet designs and different accessory configurations.

On Scene's new "Talon" helmet mounting system enables departments to solve these problems with one installation. With multiple adjusting points, the Talon can be configured to fit nearly any helmet with a brim and multiple accessory requirements.

While some manufacturer's have chosen to develop brackets utilizing elastic straps and various other components that will eventually stretch and wear out, On Scene Solutions has developed a product that allows a positive grip around the brim of the helmet eliminating the worry of becoming dislodged in an accident. With a limited lifetime warranty, and user friendly functions, this helmet bracket is built to last!
